

Example: an article with an explanation gap

Introduction

We model the system as a Markov chain (a process where the next state depends only on the current one, not the full history). Each step applies a Lindblad map to the density matrix.

Here "Markov chain" is explained on first use. "Lindblad" and "density matrix" are not -- a reader meeting them here is stuck. That is the gap explain-lint surfaces.

Method

The observable is measured, and coherence decays over time. We then apply a Fourier transform to recover the spectrum.

The terms "coherence" and "Fourier" arrive with no gloss.
